SUMMARY

Software Engineer working across two stacks: C# / ASP.NET with SQL Server for enterprise systems, and Python / TypeScript for product development. Built the Payroll and HR modules of a multi-sector corporate ERP, refactored a legacy .NET API with clean architecture, SOLID and dependency injection, and currently ship a facial-recognition access-control platform running in production across three sites.

PROFESSIONAL EXPERIENCE

Full Stack Software Developer — Velarizon *04/2026 – Present*

- Build Vitalify, an access-control and membership-management platform for gyms, live in production across 3 locations.
- Facial-API — Python / FastAPI REST API that generates and matches facial embeddings via InsightFace and pgvector vector search on PostgreSQL; the central node of the platform.
- Vitalify-Admin — Next.js and TypeScript admin panel on Supabase for user onboarding, membership management and payments, with Prisma ORM.
- Face-Recognition-Desktop — PySide6 and OpenCV desktop client handling camera capture, frame filtering and image delivery to the API.
- Data modeling with SQLAlchemy, schema validation with Marshmallow, services containerized with Docker.
- Developed and maintained the corporate ERP of a group operating in construction, mining, equipment leasing and the electrical sector.
- Payroll and Human Resources modules: payroll calculation and personnel administration, where errors carry direct tax and labor consequences.
- Leasing, machinery and inventory modules: new features and defect resolution from user-reported incidents.
- Gathered requirements on-site with the heads of each administrative area, turning operational needs into technical specifications.

Tech: *C#, ASP.NET MVC, .NET Framework, Microsoft SQL Server, Crystal Reports, Python, FastAPI, InsightFace, OpenCV, PySide6, pgvector, PostgreSQL, TypeScript, Next.js, React, Supabase, Prisma, Docker, Git.*

Software Engineer, Internship — Radical Software *12/2024 – 07/2025*

- Refactored a .NET API for financial institutions (SOFOMES), restructuring a legacy codebase with clean architecture, SOLID principles and dependency injection.
- Replaced manual data access with an ORM (Entity Framework / Dapper), improving maintainability and query traceability.
- Migrated a .NET Razor frontend to Next.js, React and TypeScript, consuming the API I had refactored.

Tech: *C#, ASP.NET, .NET, Entity Framework, Dapper, Microsoft SQL Server, React, Next.js, TypeScript, Git.*

TECHNICAL SKILLS

Programming Languages: C#, Python, TypeScript, JavaScript, SQL
Backend: ASP.NET MVC, .NET Framework / .NET Core, FastAPI, REST APIs, Entity Framework, Dapper, SQLAlchemy, Marshmallow
Frontend: React, Next.js, TypeScript, HTML5, CSS, jQuery, PySide6 (desktop)
Databases: Microsoft SQL Server, PostgreSQL, pgvector, Prisma ORM, Supabase
DevOps & Practices: Docker, Git, GitHub, CI/CD, clean architecture, SOLID, Clean Code, Scrum / Kanban
Enterprise: Crystal Reports, SAP modules, requirements gathering

EDUCATION & LANGUAGES

B.S. in Software Engineering — Universidad Estatal de Sonora 2021 – 2025 | Graduated
SOLID Principles and Clean Code — Udemy 2024
Languages: Spanish (native) · English (C1)
